

ABM Panel

28 Gauge Galvalume or Galvanized

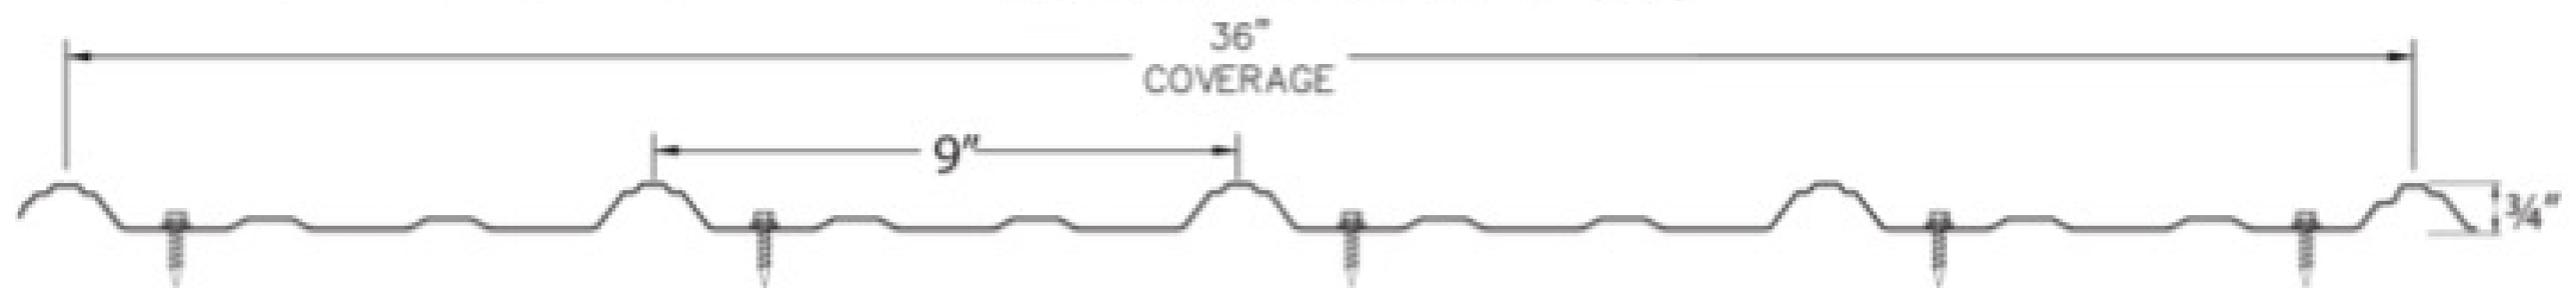

Dot (•) identifies colors also available in 26 Gauge Galvalume

36" Wide Coverage • 9" Rib Spacing • 3/4" High Rib

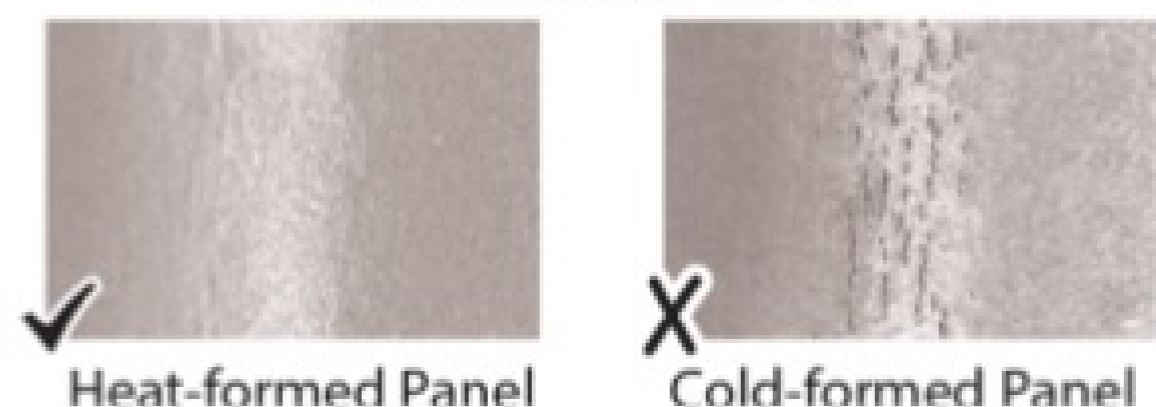

ABM Panel Profile (Acc)

There's good reason why we've been Heat Forming for more than a decade!

Heat forming practically eliminates a likely point of failure by significantly reducing the microscopic paint cracking and crazing during the forming process which may lead to paint failure and tension bend staining. Heating the panel before bending temporarily softens the paint which allows it to flex as the panel is formed and shaped.

(MAGNIFICATION OF MAJOR RIB)

Heat-formed Panel

Cold-formed Panel

Colors are as close as possible to actual colors, but may vary slightly from actual metal. Please request a free metal sample.

***Only available with Standard Panels**
